

Optomap and iWellness Digital Eye Imaging Technology

AccuVision EyeCare and Foresight Optometry are pleased to offer you and your family the most highly advanced technology available in eye disease detection, the Optomap Digital Retinal Imaging, and iWellness Optical Coherence Tomography.

Our Doctors are concerned about retinal diseases such as macular degeneration, glaucoma, retinal detachments, and diabetic retinopathy; all which can lead to partial loss of vision or blindness. Additionally, systemic diseases such as diabetes and high blood pressure can be detected with a retinal examination. Eye exams with retinal evaluations can help you safeguard both your eyesight and general health.

The Optomap and iWellness Digital Retinal Imaging allows us to thoroughly evaluate your internal eye health with dramatically improved precision that includes depth in the retina not seen with regular dilation.

The doctor strongly recommends that all patients have this procedure performed yearly. It is especially important for people who have:

- Diabetes
- High Blood Pressure
- High Cholesterol
- Glaucoma
- Flashes of light
- Floating spots
- Headaches
- Macular degeneration
- Family History of any eye diseases
- Family History of Diabetes and/or High Blood Pressure

With a yearly Optomap and iWellness retinal image, our doctors can track your eye health over time for comparison and treatment. Because Medical and Vision insurances do not pay for *routine* photos, there is a \$59.00 fee for this procedure. *(Please advise staff if you have a history of epilepsy.)*

You DON'T have to be dilated in most cases with an Optomap retinal photograph.

I choose to do an Optomap AND iWellness Digital Retinal Scan of my retina for \$59.

It only takes about 5 minutes (the best way to detect early glaucoma and macular degeneration at any age).

I choose the Optomap Retinal Scan only for \$39.00. I understand that some conditions like glaucoma are harder to detect.

I choose to be dilated today. I understand that my vision will be blurry after dilation and eyes will be light sensitive for 3-4 hours.

I DECLINE ALL: Optomap, iWellness and dilation. I understand that the potential for partial or total loss of vision may exist due to undetected eye disease. I, therefore, release AccuVision EyeCare and Foresight Optometry, it's doctors and associates from any liability resulting from failure to diagnose or treat any eye condition due to the lack of diagnostic information, which could have been obtained by performing either test.
